FMK Technologies configure extensive search mechanism which allows users to find their relevant document in seconds

Long-term document archiving

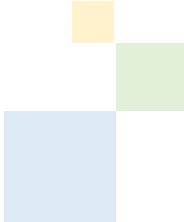

We will make archiving mechanism allows organization to archive documents and enable restoration process

SharePoint Implementation Capabilities

On-Premises

SharePoint Online

Office 365

Workflow Management Solutions

FMK Technologies uses pre-programmed mini-applications Workflows that are streamline and automate a wide variety of business processes. The workflows we develop shall be used to collecting signatures, feedback, or approvals for a plan or document, to tracking the current status of a routine procedure. We believe in enabling solutions by less human intervention to save time and effort, and to bring consistency and efficiency to tasks that are being performed in an organization.

Standard built-in workflows

These workflows are used commonly to automate document flow process within departments and teams

APPROVAL	This workflow routes a document or item to a group of people for approval. This kind of Approval workflow is associated with the Document content type, and thus it will be configured to automate document libraries
COLLECT FEEDBACK	This workflow routes a document or item to a group of people for feedback. Reviewers can provide feedback, which is then compiled and sent to the person who initiated the workflow
COLLECT SIGNATURES	This workflow routes a Microsoft Office document to a group of people to collect their digital signatures. Participants must complete their signature tasks by adding their digital signature to the document in the relevant MS Office program
PUBLISHING APPROVAL	This workflow is similar to the Approval workflow in that it automates the routing of content to subject matter experts and stakeholders for review and approval. We design specifically for publishing sites that should be under control
THREE-STATE	This workflow can be used to manage business processes that require organizations to track a high volume of issues or items, such as customer support issues, sales leads, or project tasks

Document Management Workflows Benefits

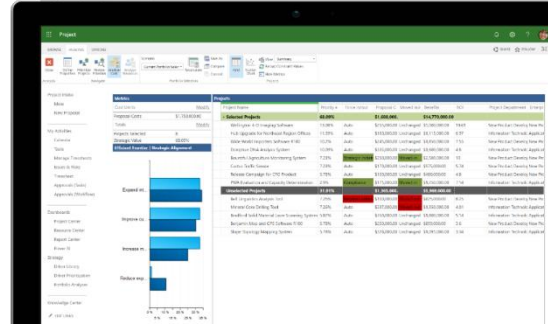

Workflows ensure that the process flow will operate efficiently and as required in the minimum time

Enterprise Project Management Solutions

FMK Technologies uses the centralized Project repository management system called project server to enable an organization to quickly start projects, prioritize project portfolio investments, and deliver results with the intended business value. It comes with Project web access to exploit the flexible project portfolio management and everyday project management.

This project management solution can be access from anywhere, prioritize projects & resources, and work from virtually anywhere

Tool power that strengthen Project & Portfolio

INCREASE TEAMWORK

Strengthen team collaboration and improve project success with enterprise social capabilities, team sites, and other easy-to-use tools

MANAGING WORK

Flexibility and visibility make it easier to manage and collaborate on projects as a team

MANAGE RESOURCES

Simplify resource management so you can see what teams are doing even when they're managing projects

DEMAND MANAGEMENT

Gain more visibility into projects, operational activities, and everyday work. Streamline projects by applying appropriate governance

MANAGE COLLABORATION

Get better results from your workforce today and prepare for the future by managing surplus and deficits across a planning horizon

MANAGE TIME AND TASK

Use a centralized and common approach to time reporting and task management

MANAGE PROGRAMS

Achieve forecasted benefits of the overall program. Establish techniques that provide a program initiation and selection framework

MANAGE FINANCIALS

Adopt financial management processes and effectively track cost performance & ensure on budget delivery with forecasted benefits

MANAGE ISSUE AND RISK

Prevent, identify, and mitigate potential business or project related risks and issues

Reporting & Business Intelligence

Collect, categorize, understand, and make decisions about project data. Using business intelligence (BI) to provide visibility and decision support to proactively manage projects, programs, and portfolios

Extensibility

Install apps from the SharePoint Store to meet your business needs, or easily write custom apps and integrate them with line-of-business systems

SharePoint Add-Ins

We build expanded SharePoint intranet site with interesting add-ins, where users get multiple information at one place and plan their work day, entertainment, meetings, and many more...

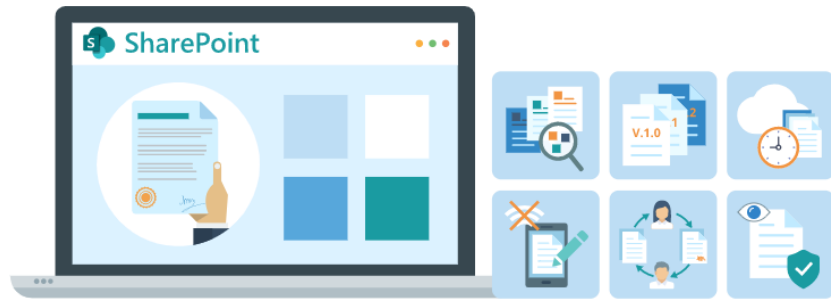

Weather	Alerts & Reminders	News
Announcement	Corporate Events	Contacts
Poll	Birthday Calendar	Picture Gallery
Corporate Discounts	Movies Gallery	Timesheets
